

Poxy Paste

Surface Seal and Port Adhesive

Poxy Paste is used as a surface port adhesive and concrete crack surface sealer. Poxy Paste is an easy to use, low odor sealer that is excellent for a novice repair technician to use. Cracks sealed with Poxy Paste can be injected after 30-50 minutes.

Once cured Poxy Paste has a high bond strength to the substrate. It is resistant to heat, solvents and most chemicals.

Poxy Paste is used in conjunction with Applied Technologies Injection Ports and crack injection epoxies and urethanes.

Benefits:

- Inject after 30-50 minutes
- Low odor
- High bond strength
- Re-use remaining material

Where to Use:

- Adhere injection ports
- Sealing of crack surface

Size: 300cc x 300cc cartridge
6/Box

Limitations:

- Minimum temperature 40°F

Color: Grey (mixed)
